

# AgentTreasury Lite

Policy-gated USDC settlement for autonomous agents

---

## WORKING MVP

Real App Kit Send · ERC-8004 identity · Public test evidence

Checkpoint 2 · July 2026

ONCHAIN AGENT

**ID 851421**

Arc Testnet

# Agents need spending power — with boundaries

## UNCONTROLLED WALLET

**A transaction request alone is not a treasury policy.**

Without explicit controls, an agent cannot prove why a payment was allowed, whether reserves were protected, or who authorized execution.

## AGENTTREASURY LITE

**Decision logic comes before the wallet signature.**

- ✓ Allowlisted recipient
- ✓ Maximum payment
- ✓ Minimum reserve
- ✓ Invoice ID required

MetaMask remains the final human authorization boundary.

**Result: explainable approval, manual authorization, and public settlement evidence.**

# The MVP turns a payment request into verifiable settlement

- 01  
**REQUEST**  
Recipient, amount, invoice
- 02  
**DECIDE**  
Policy returns approve / reject
- 03  
**AUTHORIZE**  
Human reviews in MetaMask
- 04  
**SETTLE**  
App Kit Send → ArcScan

## LIVE POLICY

### Default request: 0.01 USDC

The browser checks the expected Arc network, wallet, spendable balance, allowlist, payment cap, reserve floor, and invoice reference before enabling execution.

Private keys never leave MetaMask.

ARC TESTNET / CIRCLE APP KIT

AgentTreasury Lite

Policy-gated USDC settlement for agent wallets. Every payment is evaluated before MetaMask can authorize execution.

REQUEST → DECIDE → AUTHORIZE → SETTLE

01 - WALLET

Execution boundary

Connect MetaMask

|              |                      |         |                |                    |
|--------------|----------------------|---------|----------------|--------------------|
| Status       | Network              | Account | Spendable USDC | Native gas balance |
| Disconnected | Arc Testnet required | --      | --             | --                 |

Private keys never leave MetaMask. You approve the final transaction.

02 - REQUEST

Payment request

Recipient  
0x0246c7a00807887788a54f488a4c12b43e0d4e

Amount  
0.01

Invoice ID  
ARC-APPKIT-2020-0710-001

POLICY

✓ Allowed to request only

✓ Max amount 0.01 USDC

✓ Request at least 0.01 USDC

✓ Private key required

03 - DECISION

Agent evaluation

Waiting

Connect the expected wallet to evaluate this payment against live balances.

Recipient  
Amount  
Balance after

04 - EXECUTION

App Kit Send

Execute with MetaMask

# One decision layer, several verified settlement primitives

## FOUNDATION

Arc Testnet  
USDC-denominated gas  
Sub-second settlement

## DECISION LAYER

### AgentTreasury Lite

Policy engine + human  
authorization boundary

## BROWSER MVP

Circle App Kit Send  
MetaMask authorization  
ArcScan receipt

## SEPARATE VERIFIED ARC EXPERIMENTS

These prove additional settlement paths; they are not presented as one combined browser transaction.

### Official Memo

Structured payment references

### Multicall3From

Sender-preserving batch USDC

### ERC-8004 Identity

Official registry · Agent ID 851421

# Public evidence proves the MVP is working

0.01

USDC

Real Circle App Kit Send confirmed on Arc Testnet

851421

ERC-8004 Agent ID owned by the project wallet

27/27

Automated tests passing plus a successful production build

## CHAIN EVIDENCE

**App Kit Send** 0x6a46...1d572

**ERC-8004** 0xe8b2...e490

**Identity Registry** 0x8004...BD9e

Receipts, ownership, and tokenURI are documented in the public README.

# The core works; next is reviewer-ready packaging

## COMPLETED

- 01 Policy-gated browser MVP
- 02 Real App Kit Send evidence
- 03 ERC-8004 onchain identity
- 04 Public tests and build

## NEXT

- 01 Tighten the reviewer demo
- 02 Add a compact activity log
- 03 Package the final submission

No extra transactions without a product or programme requirement.
